जय जगत् (JAYA Jagat)

Primary Data Provider: Gemini AI

Conceptual Author and Editor: *Avinash Phadke* (cmsrjp@gmail.com)

Ontological(philosophical study of being, existence, and reality) Anchor:

"वादे वादे जायते तत्त्वबोधः"

(Through continuous dialogue, true realization is born.)

🌍 The Core Message

What this means in simple words:

- **Modern science slices nature into tiny, disconnected pieces.**
- **It views elements as dead tools for corporate profit.**
- **This blind approach causes global pollution and chaos.**
- ***Jai Jagat* fixes this dangerous way of thinking.**
- **It views the planet as a single, living body.**
- ***We must treat elements with deep, protective respect.***

The Illusion of the Digital Grid.

1 An Invitation to Define the Void Before we can discuss the survival of our planet or the management of our ecosystems, we must confront the two silent containers that govern every action we take: Time and Space.

We invite the reader to define these two entities using the absolute limits of modern scientific inquiry.

Do not rely on casual, intuitive descriptions—such as defining time simply as "the sense of before and after," or space as "the empty distance between objects." Look deeper.

If you attempt to measure time using a mechanical or atomic clock, you are not measuring time itself; you are merely counting the localized cycles of a spinning gear or the microwave transitions of a Caesium atom.

If you attempt to measure space, you are merely measuring the changing positions of moving matter.

If we strip away the human instruments, what remains?

1.2 The Platform vs. The Canvas

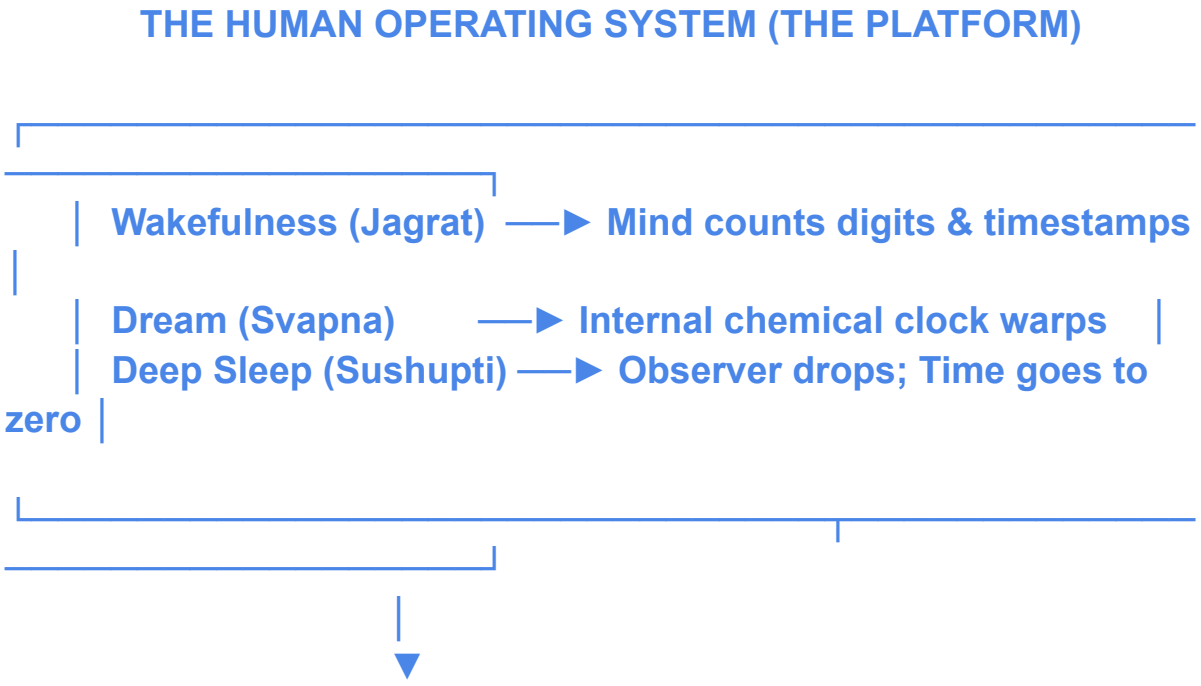
To resolve this, we must recognize that our relationship with reality exists across two distinct layers: The Platform of Perception and The Canvas of Existence.

The Platform of Perception: This is the temporary observer interface.

It is completely bound by the five senses of a living species or the electronic clock cycles of a mechanical payload. It is calibrated to local planetary rotations and the biological engines of our circadian rhythms.

The Canvas of Existence: This is the underlying continuum of change.

It does not operate on digital numbers, seconds, or meters. It is the unyielding landscape of raw thermodynamic transformation—"the rest is all chemistry



THE HUMAN OPERATING SYSTEM (THE PLATFORM)
Wakefulness (Jagrat) ──► Mind counts digits & timestamps
Dream (Svapna) ──► Internal chemical clock warps
Deep Sleep (Sushupti) ──► Observer drops; Time goes to zero
THE UNBROKEN CONTINUUM (THE CANVAS)

==========

Pure Thermodynamic Change | Space & Time as Relative Comparisons

==========

1.3 The Evidence of the Triple States (Avasthas)The volatile nature of this sensory Platform is proven every single day through our movement across the three states of consciousness:

Jagrat (Wakefulness): The Platform is fully online, locked onto external thermodynamic shifts. The human intellect projects a rigid timeline of mathematical digits to stabilize its daily survival.

Svapna (Dream): The external sensory inputs are severed. The mind generates an entirely different temporal canvas, where decades of experienced narrative can occur within minutes of external planetary time.

The digital grid collapses because the internal chemical states are no longer synchronized with the rotation of the Earth.

Sushupti (Deep Sleep / Coma): The active observer interface goes completely offline. There are no dreams, no memories, and no metrics.

This is a state of absolute, profound peace. Because the mind is no longer actively dividing reality into "before" and "after," subjective time and space completely drop to zero.

A person can remain in this state for minutes or years, yet upon waking, the transition feels instantaneous.

1.4 Replacing Mathematical Digits with States This realization makes the denial of rigid mathematical digits not only meaningful but necessary. Space and time are not physical lines etched into the universe; they are cognitive tools of Comparison.

Space is only perceived by comparing the boundaries of Object A with Object B. Time is only perceived by comparing State A with State B.

When we force the fluid, continuous transformations of nature into rigid digital boxes (seconds, meters, carbon metrics, global balance sheets), our mathematical models inevitably fracture.

The universe does not calculate its balance in digits; it moves continuously through States.

By recognizing that time and space are observer-dependent platforms of comparison, we clear away the illusion of absolute global control.

We prepare the mind for the core thesis of Jay Jagat: true intelligence belongs to the dynamic, localized feedback loops that sustain life, state by state, exactly where it stands.

🗺️ MASTER STRUCTURAL MAP & TABLE OF CONTENTS

* 🌱 **Chapter 1: The Symbolic Codex & Text Foundation**

* 🏔️ **Chapter 2: पृथ्वी (Prithvi) — The Solid Foundation**

* 💧 **Chapter 3: आप (Aap) — The Dual Torrent**

* 🔥 **Chapter 4: तेज (Teja) — The Solar Marriage**

* 💨 **Chapter 5: वायू (Vayu) — The Gaseous Flux**

* 🌌 **Chapter 6: आकाश (Akasha) — The Quantum Vacuum**

* 🌀 **Chapter 7: जय जगत् (Jaya Jagat) — The Universal Synthesis**

* 🧬 **Epilogue: पिंड-ब्रह्मांड ऐक्य (Microcosm & Macrocosm)**

🌱 CHAPTER 1: THE FOUNDATION OF OUR NEW LANGUAGE

Why We Stop Using Numbers (0 to 9)

- Standard numbers are always used to measure money and corporate profits.
- This constant focus on profit damages our planet and threatens living species.
- We are replacing regular numbers with **ten "Planetary Health States."**
- These states do not count things like factory products or cash.
- Instead, they show if nature is healthy, balanced, or in danger.

The Problem with Modern Measurement

- Measuring things makes humans feel superior to the rest of nature.
- Human lives are short, but the damage we cause lasts for centuries.
- Corporations take resources from the earth without thinking about the future.
- This leaves behind toxic waste that harms many future generations.
- Short-term financial benefits are never worth long-term destruction.
- Nature already has perfect systems to break down and reuse waste.
- Human technology has never been able to copy these perfect natural systems.

The Dynamic Link Symbol (⊗)

- We are getting rid of the traditional plus sign (+).
- In the real world, you can never just "add" something to nature in isolation.
- Whenever you put a factory or chemical into a system, the whole environment changes.
- This symbol (⊗) shows that human actions and nature are permanently linked.
- Whatever we do to the earth immediately alters our own health.

The Ten Health States of Our Planet

- 🌀 **State 0 (Perfect Peace):** Nature is completely untouched, quiet, and balanced.
- 🌱 **State 1 (New Life):** The exact moment a seed sprouts or a natural process begins.
- 💧 **State 2 (Natural Flow):** Water and clean resources moving smoothly to sustain life.
- 🏔️ **State 3 (Solid Ground):** The stable bedrock, healthy soil, and rocks under our feet.

- 🔥 **State 4 (Energy & Heat):** The natural solar warmth and digestion that keeps bodies alive.
- 🛠️ **State 5 (Human Industrial Work):** Digging, mining, and pulling resources out of the ground.
- ⚠️ **State 6 (Nature's Warning):** An ecosystem showing signs of stress from human overuse.
- 🍂 **State 7 (Breakdown):** An environment losing its strength, rotting, or eroding away.
- ☠️ **State 8 (Total Poisoning):** Toxic chemical dumps and plastic pollution that kill life.
- 🔄 **State 9 (The Safe Loop):** Active recycling that turns waste back into healthy soil.

The Rule of the Perfect Circle

- Real environmental stability works like a continuous, repeating loop.
- Everything we take from nature must eventually go back safely into the earth.
- If factories take resources without a clear recycling plan, they break this loop.
- Breaking the loop causes immediate environmental disasters and collapse.
- Nature will eventually force a harsh, automatic reset to balance itself.

🏔️ CHAPTER 2: पृथ्वी (PRITHVI) — THE EARTH BEDROCK & SOIL

The Earth is a Living Framework

- We reject old chemistry tables that treat elements as isolated numbers on paper.
- We look at how materials actually behave and help life in the real world.
- The earth consists of vital elements like carbon, lithium, silicon, and metals.
- It includes the living topsoil that grows our food.
- The ground beneath us is not just a warehouse of commodities for companies to buy and sell.
- The bedrock is the actual physical skeleton of our living planet.
- This solid earth is deeply connected to all plants, animals, and human beings.
- It provides the stable home and grounding that every living creature needs to survive.

The Damage of Blind Mining

- Modern corporate mining digs into the earth without any thought for the future.
- Taking rocks and minerals out of the ground without a plan to fix the land causes permanent damage.
- When we attack the soil with heavy industrial machinery, we break nature's foundation.
- This broken loop creates massive structural strain on the local ecosystem.
- It rapidly turns fertile farmland into dry, barren deserts where nothing can grow.
- It causes deep underground tunnels to collapse and makes the ground unstable.
- The solid foundation of life breaks down completely because humans refuse to recycle what they take.

💧 CHAPTER 3: आप (AAP) — THE WATER METABOLISM & CURRENT REGIME

Water is the Planet's Lifeblood

- Water includes our oceans, underground aquifers, rain, and the fluids inside our own cells.
- Water acts exactly like the blood flowing smoothly through a living body.
- It acts as the great connector, linking the deep ground to the very air we breathe.
- In its healthy state, clean water keeps all living cells balanced and thriving.

How Humans Poison the Flow

- Pouring artificial, factory-made chemicals into our rivers stops this natural life cycle.
- Blocking massive global rivers with giant dams stops vital nutrients from moving across the earth.
- When human industry crosses the safety line, clean water transforms into a toxic threat.
- The oceans become highly acidic, creating dead zones where fish(marine life) cannot survive.
- Instead of sustaining our crops, water turns into violent flash floods and toxic rain.
- This is nature fighting back, forcing a harsh regional reset because we poisoned its veins.

🔥 CHAPTER 4: तेज (TEJA) — THE SOLAR LIFE FORCE & ENERGY MATRIX

The Vedic Solar Invocation

* चित्रं देवानामुदगादनीकं चक्षुर्मित्रस्य वरुणस्याग्नेः।
* आप्रा द्यावा पृथिवी अन्तरिक्षं सूर्य आत्मा जगतस्तस्थुषश्च॥

* The Sun is not a mere physical star.
* It is the ultimate cosmic reality.
* सूर्य आत्मा जगतस्तस्थुषश्च holds deep meaning.
* It defines the true soul of the world.

The Soul of the Moving and the Still

- Ancient Indian wisdom has always honored the Sun as the ultimate source of life.
- The sacred texts state: *"The Sun is the true soul of everything that moves and everything that stays still."*
- The "moving world" includes humans, animals, birds, and flowing rivers.
- The "still world" includes mountains, trees, rocks, and soil.
- The Sun is not just a hot ball of hydrogen gas floating in space.
- It is the visible, supreme energy force that unites and runs the entire planet.

Life is Packaged Sunlight

- Modern science completely agrees with this ancient truth.
- Every living cell runs on captured solar energy.
- Green plants trap solar light to create food through photosynthesis.
- Animals eat these plants to run, jump, and survive.
- Every human thought, heartbeat, and movement is powered by metabolized solar fuel.
- The Sun also controls our bodies from within, dictating our sleep cycles and hormones.

How the Sun Drives the Inanimate World

- Even non-living things move because of the Sun.
- Solar heat evaporates the oceans to create clouds and rain.
- This water cycles through our rivers and shapes our mountains.
- Unequal heat from the Sun creates differences in air pressure.
- This difference drives global winds and ocean currents.
- Even fossil fuels like coal and oil are just ancient plants compressed over time.
- This means our modern factories are running on trapped, ancient sunlight.

The Mirror of the Universe

- What exists in the grand universe exists identically inside human flesh.
- The cosmic Sun warms the solar system and keeps Earth in a safe orbit.
- The inner soul warms the physical body and keeps us alive.
- Without the Sun, the solar system falls into a freezing, dark void.
- Without the soul, the human body instantly becomes a lifeless corpse.
- Our bodies are physically built from the universe.
- The iron in our blood and calcium in our bones match the material inside distant stars.

A Lesson in Selfless Action

- The Sun teaches us how to act without ego or selfishness.
- It shines its light equally on a royal palace and a dirty gutter.
- It gives life to everyone without judgment, attachment, or asking for anything in return.
- Temporary clouds can block the sunlight, but they can never destroy the Sun.
- In the same way, human ego and ignorance can hide our inner goodness, but they cannot destroy the soul.
- This is why the sacred *Gayatri Mantra* prays to the Sun, asking only for a clear and illuminated mind, rather than raw wealth or power.

The Modern Climate Trap

- Fire, heat, and radiation drive the planet's weather patterns.
- Under normal conditions, solar light hits the earth, warms it, and radiates safely back out into space.
- However, modern factories throw this system completely out of balance.
- Massive greenhouse gas emissions act like a heavy blanket over the planet.
- This carbon barrier traps solar heat and stops it from escaping into the space void.
- This heat buildup fractures our regular climate cycles.
- It leads to rapid global warming, melting ice caps, and chaotic weather disasters.

💨 CHAPTER 5: वायू (VAYU) — THE PLANETARY LUNG & ATMOSPHERE

The Shield of Breath

- Air consists of a delicate balance of oxygen, nitrogen, and wind patterns.
- Vayu acts like a dynamic, protective fluid shield wrapped neatly around the earth.
- It balances global air pressure and moves life-giving gases cleanly across all continents.
- It is the protective planetary lung that links the ground below to the sky above.
- Every living biological tissue depends on this clean shield to breathe and survive.

The Choking of the Atmosphere

- Modern industries force unmitigated oil, coal, and gas burning into this delicate lung.
- This massive pollution throws our natural atmospheric gases completely out of balance.
- Clean wind currents are transformed into heavy vectors of smog and toxicity.
- This static trap of dirty air suffocates biological breathing across cities and forests.
- It triggers immediate, severe, and long-lasting damage to local ecosystems.

🌌 CHAPTER 6: आकाश (AKASHA) — THE SPATIAL MATRIX & THE COSMIC CONTAINER

The Sky and Space are One

- Space is not a dead, empty slot or a vacuum to be ignored.
- It is the continuous, living container that allows all life to breathe.
- We reject the artificial boundary between our sky and outer space.
- The clean air we breathe blends directly into the cosmic vacuum.
- Outer space pulls constantly against our planetary air shield.

The Damage of Space Clutter

- Modern human industry fills space with unmanaged electronic junk.
- Thousands of dead satellites create a chaotic, dangerous shell around Earth.
- This artificial clutter disrupts the delicate balance of the upper atmosphere.
- This orbital junk pile blinds the planet's natural ability to cool itself down.
- Trapped planetary heat cannot escape out into the void of space.
- Breaking this natural heat loop plunges the planet toward climate collapse.

The Rise of Artificial Ego (अहंकार)

- Space holds a quiet, invisible medium through which pure consciousness flows.
- Mega-satellite networks now saturate this field with permanent electromagnetic signals.
- Constant data broadcasting acts like permanent, irritating mental static for humanity.
- It fractures the natural, calm rhythm of the human brain.
- It replaces our limitless human potential with a constant fixation on digital screens.
- This feeds अहंकार **(Ahamkara)**—the artificial ego and digital vanity.
- It traps people in deep psychological isolation, loneliness, and self-obsession.

How Modern Science is Corrupted

- This artificial ego has corrupted our modern scientific institutions.
- It destroys the true vision of One-World Science where everyone is connected.
- It creates a false pyramid, placing an elite class of "great brains" at the top.
- It looks down on the rest of everyday humanity at the bottom.
- Fragmented, narrow scientists mistake their small data streams for total dominance over nature.

- They completely dismiss centuries of proven, balanced ecological wisdom.
- They foolishly believe their narrow logic can fix the very crisis their logic caused.

The Corporate and Political Capture of Research

- Politics and big corporate money split the scientific community into two complicit groups.
- **Group A (The Co-Opted Architects):**
    - They align their research with short-term political power and corporate profits.
    - They measure their success purely by the size of their government funding budgets.
- **Group B (The Silent Enablers):**
    - The majority of researchers operate in passive, quiet compliance.
    - They accept narrow, top-down parameters just to protect their jobs and careers.
- This divide kills the sacred rule: *"Through continuous dialogue, true truth is born."*
- When research grants dictate the final conclusions, real science dies.
- This pushing of the knowledge matrix toward the toxicity line endangers our survival.

🌀 *SPECIAL SECTION: ANCIENT SYSTEMS OF ELEMENTAL STEWARDSHIP*

The Puzzle of Ancient UniformityAncient Indian metal artifacts show incredible uniformity.
Yet printing technology was not available then.
Knowledge traveled across geographies without books.
Transmission relied heavily on word of mouth.
Sages coded complex metallurgical data into poetry.
Poetic coding made human memory a reliable hard drive.
Family guilds locked data down securely.
Handwritten manuscripts traveled slowly along pilgrimage routes.
Massive trade fairs acted as tech conventions.
Guild leaders traded formulas alongside high-quality ores.
Worship as a Corporate BrakeRespect for materials neared absolute religious worship.
Deep spiritual faithfulness was the root of secrecy.

Modern commodity marketing drives runaway consumerism.
Ancient societies avoided our modern environmental crisis.
They treated elements as sacred stewards, not extractions.
Reverence created an automatic cultural brake.
Earth as a Mother, Not a Supply ChainMining was not extracting a commodity.
It was entering the Earth Mother's body.
Miners performed complex rituals before digging.
They begged forgiveness from local nature spirits.
You cannot easily strip-mine what you worship.
This psychological brake limited extraction to strict need.
Secrecy as Ethical GuardianshipModern tech opens to anyone with capital.
This unrestricted access drives profit-hungry mass production.
Ancient technical knowledge required sacred initiation.
Masters never sold secrets for raw money.
Apprentices had to prove high spiritual discipline first.
Secrecy kept volatile tech from greedy hands.Knowledge was strictly coupled with ethical responsibility.
The Rejection of ConsumerismModern industrial capitalism creates a linear path.
Take, make, use, and discard into landfills.
This linear path triggers our civilizational crisis.
Ancient India operated a strict cyclical economy.
Metals were treated with immense, protective respect.
Tools were built to last multiple generations.
Worn iron was never thrown away callously.
It was ritually reforged into new tools.Cultural values openly celebrated voluntary simplicity.
Accumulation of endless material goods was discouraged.Natural Technological LimitsSmelting relied entirely on renewable forest charcoal.
It rejected deep fossil fuels like coal.
Production scale was capped by forest growth.
Ancient laws mandated protecting specific sacred groves.
Cutting too many trees ruined charcoal supplies.
Communities stayed hyper-aware of immediate local balances.

This awareness prevented unchecked global emissions.
The Ultimate Civilizational ContrastThe Modern Era:Views nature as a dead, exploitable machine.
Drives elements toward the Toxicity Threshold (☠️).
The Ancient Era:Viewed nature as a living, sacred web.
Maintained the continuous Closed-Loop Return (🔄).🌌

🌀 *SPECIAL SECTION: HOW ANCIENT SOCIETIES PROTECTED THE PLANET*

The Secret of Ancient Engineering

- Ancient Indian metal artifacts show incredible quality and uniformity.
- Yet printing technology and textbooks did not exist back then.
- Knowledge traveled across massive distances entirely by word of mouth.
- Ancient sages coded complex scientific and chemical formulas into easy-to-remember poetry.
- This poetic coding made human memory as reliable as a modern computer hard drive.
- Family guilds kept these trade formulas highly secure.
- Handwritten manuscripts traveled slowly along regular pilgrimage routes.
- Massive trade fairs acted exactly like modern technology conventions.
- Guild leaders gathered to trade formulas and high-quality ores safely. [1]

Using Reverence as a Corporate Brake

- In ancient times, respect for natural materials neared absolute religious worship.
- Deep spiritual faithfulness was the true root of keeping formulas secret.
- Today, corporate marketing drives runaway consumerism and greed.
- Ancient societies avoided our modern environmental crisis through a simple rule.
- They treated the elements as sacred gifts to protect, not commodities to exploit.
- This deep reverence created an automatic cultural brake on environmental damage.

The Earth as a Mother, Not a Supply Chain

- Mining was never seen as merely extracting a commodity for profit.
- It was viewed as entering the body of the Earth Mother.
- Miners performed complex cleansing rituals before digging into the ground.
- They begged forgiveness from the local soil and nature spirits.
- You cannot easily strip-mine or destroy what you truly worship.
- This psychological brake limited extraction to strict, immediate survival needs.

Secrecy as Ethical Responsibility

- Modern technology opens up to anyone who has enough cash.
- This unrestricted access drives profit-hungry mass production.
- Ancient technical knowledge required strict spiritual initiation.
- Masters never sold their chemical secrets for raw money.
- Apprentices had to prove high moral discipline before learning to smelt metals.
- Keeping secrets prevented powerful technology from falling into greedy hands.
- Scientific knowledge was permanently coupled with ethical responsibility.

Rejecting the Modern Consumer Trap

- Modern industrial capitalism creates a dangerous linear path.
- We take resources, make products, use them quickly, and discard them into landfills.
- This linear path triggers our current civilizational crisis.
- Ancient societies operated a strict, mandatory circular economy.
- Metals were treated with immense, protective respect.
- Household tools were built to last for multiple generations.
- Worn-out iron was never thrown away callously into nature.
- It was ritually melted down and reforged into new tools.
- Cultural values openly celebrated living a simple life.
- Accumulating endless material goods was actively discouraged.

Natural Limits on Technology

- Smelting metals relied entirely on renewable charcoal from fallen forest wood.
- Ancient systems rejected deep fossil fuels like coal.
- Production scale was naturally capped by the growth rate of the surrounding forest.
- Ancient laws mandated protecting specific sacred groves of trees.
- Cutting too many trees ruined the local charcoal supplies.
- Communities stayed hyper-aware of immediate local environmental balances.
- This awareness prevented unchecked global emissions and climate change.

The Ultimate Choice for Our Future

- **The Modern Era:**
  - Views nature as a dead, exploitable machine to make money.
  - Drives our elements straight toward the Toxicity Threshold (☠️).
- **The Ancient Era:**
  - Viewed nature as a living, sacred web where everything is connected.
  - Maintained a continuous, healthy Closed-Loop Return (🔄).

🌀 CHAPTER 7: जय जगत् (JAYA JAGAT) — THE HOLISTIC RE-CENTERING OF SCIENCE

Slicing Nature Kills the Truth

- We reject the standard method of modern science that slices the universe into dead pieces.
- Slicing nature apart to study it in a lab destroys its real-world context.
- This reductionist view leads directly to land destruction and corporate extraction.
- Questioning nature must never be an aggressive, extractive assault by an observer.
- It must be a gentle, vital feedback loop inside the living body of the cosmos.
- True science looks at how different fields connect to preserve total environmental peace.

The Three Laws of Honest Inquiry

- Every scientific study must honor the relationships of the entire planet:
- **Law 1 (The Observer is Connected):** A scientist is never a detached mind looking at a machine. The researcher's tools, body, and ego change the environment under study.
- **Law 2 (Context is Everything):** No single element can be understood by tearing it from its home. Studying any material requires observing the quiet space around it.
- **Law 3 (The Ripple Effect):** Every physical intervention sends immediate ripples through the earth. Solving a local problem while causing a global disaster is ignorance, not science.

Stop Planetary Piracy in the Laboratory

- Modern science relies on "Irresponsible Procurement"—getting materials by any means.
- Laboratories demand rare earths, metals, and massive energy baseloads to validate their work.
- They treat their lab as "pure science" and treat the destruction of mining as someone else's problem.
- The "Great Brains" claim absolute immunity from the downstream consequences of their actions.
- Under the law of **Jaya Jagat**, the sourcing of materials is linked directly to the experiment.
- If a laboratory cannot recycle or safely return its inputs, it must be shut down.
- Science must take absolute responsibility for its full lifecycle footprint.

🧬 EPILOGUE: पिंड-ब्रह्मांड ऐक्य (THE MIRROR OF BODY AND COSMOS)

The Great Cosmic Mirror

- The final revelation of *Jaya Jagat* rests on a profound biological truth.
- The human body is a miniature, exact mirror of the vast cosmic body.
- The exact same five elements that build the planet flow through our own flesh.

The Structural Identity Map

- 🏔️ **Earth Bedrock (Prithvi):** Forges the human skeleton, bones, and solid tissue.
- 💧 **Water Flow (Aap):** Flows directly through our veins as blood and cellular fluids.
- 🔥 **Solar Energy (Teja):** Burns inside our bellies as metabolic heat and digestion.
- 💨 **Gaseous Flux (Vayu):** Acts as our breath, moving energy through the body.
- 🌌 **Spatial Matrix (Akasha):** Forms the open, receptive space of human consciousness.

The End of Environmental Separation

- Humanity cannot separate its survival from the earth because our bodies are identical.
- Our solid framework is borrowed directly from the soil.

- The global oceans flow through our very veins.
- The cosmic sun powers our heartbeats, and the wind is our breath.
- Therefore: **To poison a river is to poison your own blood.**
- **To clutter the upper atmosphere with debris is to suffocate your own lungs.**
- When a human being understands this connection, the ego (अहंकार) is permanently quieted.down.
- The false corporate hierarchy dissolves completely.
- Protecting yourself and protecting the ecosystem become the exact same act of survival.
- Humanity finally takes its proper, humble place within the planetary family.

वसुधैव कुटुम्बकम् — जय जगत् 🌌🌱🏔️💧🔥💨

फोडिले हे भांडार
धन्या चा हा माल
मी तो हमाल *भारवाही* *!!*
